Dear Doug

I am writing to thank you for your support and patience in seeing us at Radiant Health Ltd through the implementation of Netstock recently, and to formally close it as a project.

You have always been responsive and willing to help us to resolve problems. I especially appreciated your willingness to provide quality assurance when I was new to the company and to Exo. It was a great asset to have you on our data validation and we had confidence in your ability to spot any errors. Your understanding of the environment and potential pitfalls was a real help.

The benefits are already being realised, with the monthly preparation for forecasting taking considerably less time, as does the raising of purchase orders on the supplier. It is a significant improvement to be able to manage the exceptions and let the model take care of the rest. The supplier is also impressed with Netstock's capabilities around forecast orders and reporting in real time.

All of us in the team thank you for helping us with the implementation and we look forward to the next project with your help!

Yours sincerely

Jenny Alison

Project Manager
